

Managed Antivirus

Huntress' Managed Antivirus enables you to extract maximum value from Microsoft Defender Antivirus, a built-in and often untapped Windows OS security component. This empowers you to reinvest more money back into growing your business.

HARNESS THE BENEFITS OF YOUR INVESTMENT IN MICROSOFT WINDOWS

Rather than spending more on additional security tools, Managed Antivirus empowers you to reclaim existing investments included within Microsoft Windows—allowing you to redirect funds toward fortifying other areas of your security stack.

STREAMLINE ENDPOINT SECURITY MANAGEMENT INTO ONE DASHBOARD

Our Managed Antivirus offers a centralized, multi-tenant dashboard to monitor and manage Defender on all protected endpoints. See detections and events, monitor scans and protections, set exclusions and execute remediation actions—all from The Huntress Security Platform.

QUICKLY IDENTIFY AND REMEDIATE INCIDENTS

The Managed Antivirus dashboard extracts and features essential information from Defender to identify and prioritize incidents and inform remediation steps. In addition, Huntress' ThreatOps team provides an added layer of expertise to analyze alerts and recommend action items when remediations cannot be performed by Defender alone.

Centrally manage Defender AV right from The Huntress Security Platform to streamline time spent on threat hunting.

Managed AV allows us to maximize the investments we've already made in Microsoft Windows, and coupled with Huntress' existing detection and response capabilities, we're able to harden endpoint security across the board for our clients without needing to justify increased prices.

KEY FEATURES

Centralized policy management

of Defender configuration and policy compliance enforcement across all endpoints at the account, organization or host level. Easily apply Huntress-recommended policy settings or your own multi-tenant recommended configuration policy.

Actionable incident reporting

that enables you to view and examine incidents that Defender flags, including event details and remediation steps taken. Huntress' human threat hunters will review certain detections and provide a contextual classification of detections for enrichment and triage. Actionable incident reports will be sent to configured integrations (PSAs).

Assisted remediation

powered by The Huntress Security Platform for incidents that Defender flags as needing a reboot or full scan. Assisted remediation automates the execution of customized remediation actions that Huntress provides; however, administrators can choose to do them manually or allow the Huntress agent to perform new actions.

Greater Defender visibility

into the health, status, latest scan and signature updates for all hosts. See what Defender detects—including discovered actions, which are highlighted and brought to the surface.

Comprehensive Huntress dashboard

shows high-level oversight into security statuses in Defender, including flagged incidents, with the ability to drill down for monitoring and managing at the account and organization levels. You can gather essential information to identify and prioritize incidents and inform remediation steps—all from the Managed Antivirus dashboard to streamline time spent on threat hunting.

Easy to deploy and manage

through the lightweight Huntress agent and robust management integrations. Simply deploy the Huntress agent and enable the Managed Antivirus service.

SEE WHAT YOUR AV CAN DO FOR YOU

THE HUNTRESS SECURITY PLATFORM

Persistent Footholds

Huntress monitors for persistent footholds and delivers actionable recommendations and instructions for removal.

Ransomware Canaries

Like the old canary in the coal mine, our Ransomware Canaries enable faster and earlier detection of potential ransomware incidents.

External Recon

External Recon gives you visibility into external attack surfaces by monitoring potentially exposed services like remote desktop services/RDP.

Managed Antivirus

Through centralized management and visibility, Managed AV enables you to reclaim and amplify existing investments in Defender AV.

Partner Enablement

The Huntress Partner Portal offers an array of fully customizable presentations, assets and documents, along with educational materials to help guide your clients—as well as your own teams—through their own cybersecurity journey.
